

NHMRC Centre for
Blood Transplant
and Cell Therapy

Supported by Leukaemia Foundation

Prof Catherine Bollard

Children's National Hospital and
George Washington University

“ T cell therapies for lymphoma ”

The Centre for Blood Transplant and Cell Therapies (CBTCT) brings together the largest allogeneic stem cell transplant units in Australia with a focus on identifying transplant and cell therapy strategies to reduce graft versus host disease and improve patient and disease outcomes after transplant. In this webinar series, speakers will review major topics in stem cell transplantation and cell therapy, highlighting how key advances are addressing the current challenges in stem cell transplantation. This webinar features Professor Catherine Bollard, who is the current Program Director for Cell Enhancement and Technologies for Immunotherapies at the Children's National Hospital, Associate Centre Director for Translational Research and Innovation at the GW Cancer Centre and Professor of Pediatrics and Microbiology, Immunology and Tropical Medicine at the George Washington University. Her bench and translational research has focused on improving post-transplant outcomes through developing novel cellular therapeutics, leading to over 200 peer reviewed publications and ongoing independent NIH funding for over a decade. In this webinar, Professor Bollard will be outlining the role of T cell therapies for lymphoma.

WEBINAR

Centre for Blood Transplant and Cell Therapies Webinar Series

Monday 17 October 2022
8am (AEDT)

ALL WELCOME TO ATTEND
